

COMFORT MATTERS

No matter how cold winter gets, we can help you stay toasty warm and fuel efficient.

How to winter-proof your home.

5 tips to keep your home comfortable and energy efficient.

- 1 Get an Ultra Smart Thermostat.** An Ultra Smart Thermostat, such as the **iComfort® S30**, is both convenient and helps save energy. With Ultra Smart features like Schedule IQ and Smart Away®, the thermostat adapts heating and cooling to match your routine and help lower energy costs substantially.

- 2 **Have your furnace serviced.** A properly adjusted furnace runs more efficiently, saving you up to 5% on your winter heating costs.
- 3 **Seal up energy-wasting drafts.** Draft guards are a cheap and effective way of stopping heat from escaping under doors.
- 4 **Turn your ceiling fans to clockwise.** This pushes the warm air near the ceiling down into the room, raising the room's temperature without turning up the thermostat.
- 5 **Dress warmly.** Wear layers of clothing, even inside the house. This will keep you warm and allow you to turn your thermostat down a few degrees, helping you save energy.

Zoning is the perfect solution for whole-home comfort.

Is the upstairs of your home too hot in the summer and too cold in the winter? If you're struggling to keep your whole home

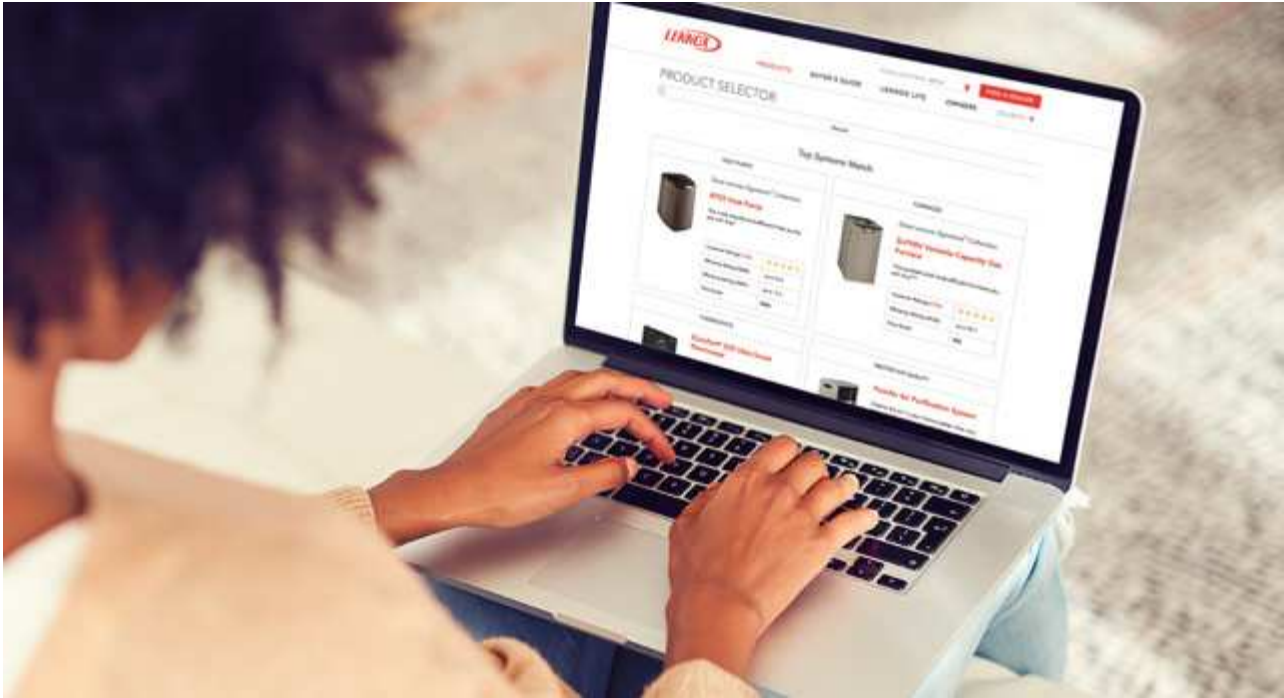

comfortable, a Lennox® zoning system could be the perfect solution for you. A Lennox zoning system breaks your home into different segments based on your heating and cooling needs. Instead of trying to control the temperature throughout the entire home, zoning allows you to control temperatures in individual areas. So, temperatures remain consistent, from floor to floor and room to room, and your whole home stays more comfortable and energy efficient.

Winter brings good cheer—and not so good air!

Winter is a time of wonderful holidays and celebrations. Your home can be filled with lots of guests, animals, cooking smells and warm fires, which means the air is filled with allergy-aggravating dust, pet dander, winter viruses and a potpourri of strange smells. Lennox Healthy Climate Solutions™ can help keep the air in your home clear, fresh and healthy—no matter how many guests you have. A whole-home solution for all your indoor air quality needs,

Healthy Climate Solutions add a breath of fresh air to every room—and every festivity.

Lennox makes life more comfortable.

At Lennox, everything we do is aimed at making you feel more comfortable in your home. We create innovative and efficient systems with precise control that improve the quality of the air in your home, while maintaining optimal temperature and humidity levels. Our dealers provide expertise and advice to serve your needs quickly and with the highest level of care. Let us help you find the perfect products for your home. Whether you are looking for a single heating or cooling product, or you are in the market for a whole system—we have the right solution for you.
